

The SOAR Profile (TSP) 2.0: A Rapid Assessment Tool to Help Individuals and Teams Build Strategic Capacity

Matthew Cole, PhD, Jacqueline Stavros, DM, and Massimo Zerilli, MBA GRA
College of Business and Information Technology, Lawrence Technological University

INTRODUCTION

A McKinsey Quarterly study of 1,300 global executives found that the highest performing organization had a clear purpose, an understanding of *strengths*, shared *aspirations*, and leaders who knew how to unleash ideas (*opportunities*) with a *results-driven* process.¹ SOAR (strengths, opportunities, aspirations, and results), is a framework for strategic thinking, leading, and planning designed to empower leaders and other stakeholders in the organization to cooperate on strategic change initiatives through a collaborative approach of inquiring, imaging, innovating, and implementing (refer to SOAR framework).²

The SOAR Profile is a rapid self-report assessment instrument designed to help individuals and teams understand their natural SOAR-based strategic thinking, planning, and leading capacity and capabilities.³ The 44-item SOAR Profile 1.0 was created in 2013 based on the theory and empirical research of SOAR. The SOAR Profile measures *Appreciative Inquiry perspective*, *SOAR-based Strategic Capacity*, *SOAR Capabilities*, and *Strategic Elements*.

To date, SOAR Profile 1.0 has been used in 12 empirical studies to understand individual and team SOAR-based strategic thinking, planning and leading from over 1,000 study participants (see table, SOAR Profile: Empirical Research). This study presents an overview of a new version of the SOAR Profile—the 32-item SOAR Profile 2.0.

METHODS

Beginning in January 2017, a review was conducted of the existing empirical studies utilizing the 44-item SOAR Profile 1.0. Results of the review identified redundancy in the measurement of *Appreciate Inquiry perspective*, *Strategic Capacity*, and *Strategic Elements*. Accordingly, 12 redundant items were removed from the SOAR Profile 1.0, leading to the creation of the 32-item SOAR Profile 2.0. Beginning in Summer 2017, the SOAR Profile 2.0 will undergo the same psychometric testing as the SOAR Profile 1.0 (i.e., internal consistency reliability and construct validity) by recruiting undergraduate and graduate student participants.

DISCUSSION

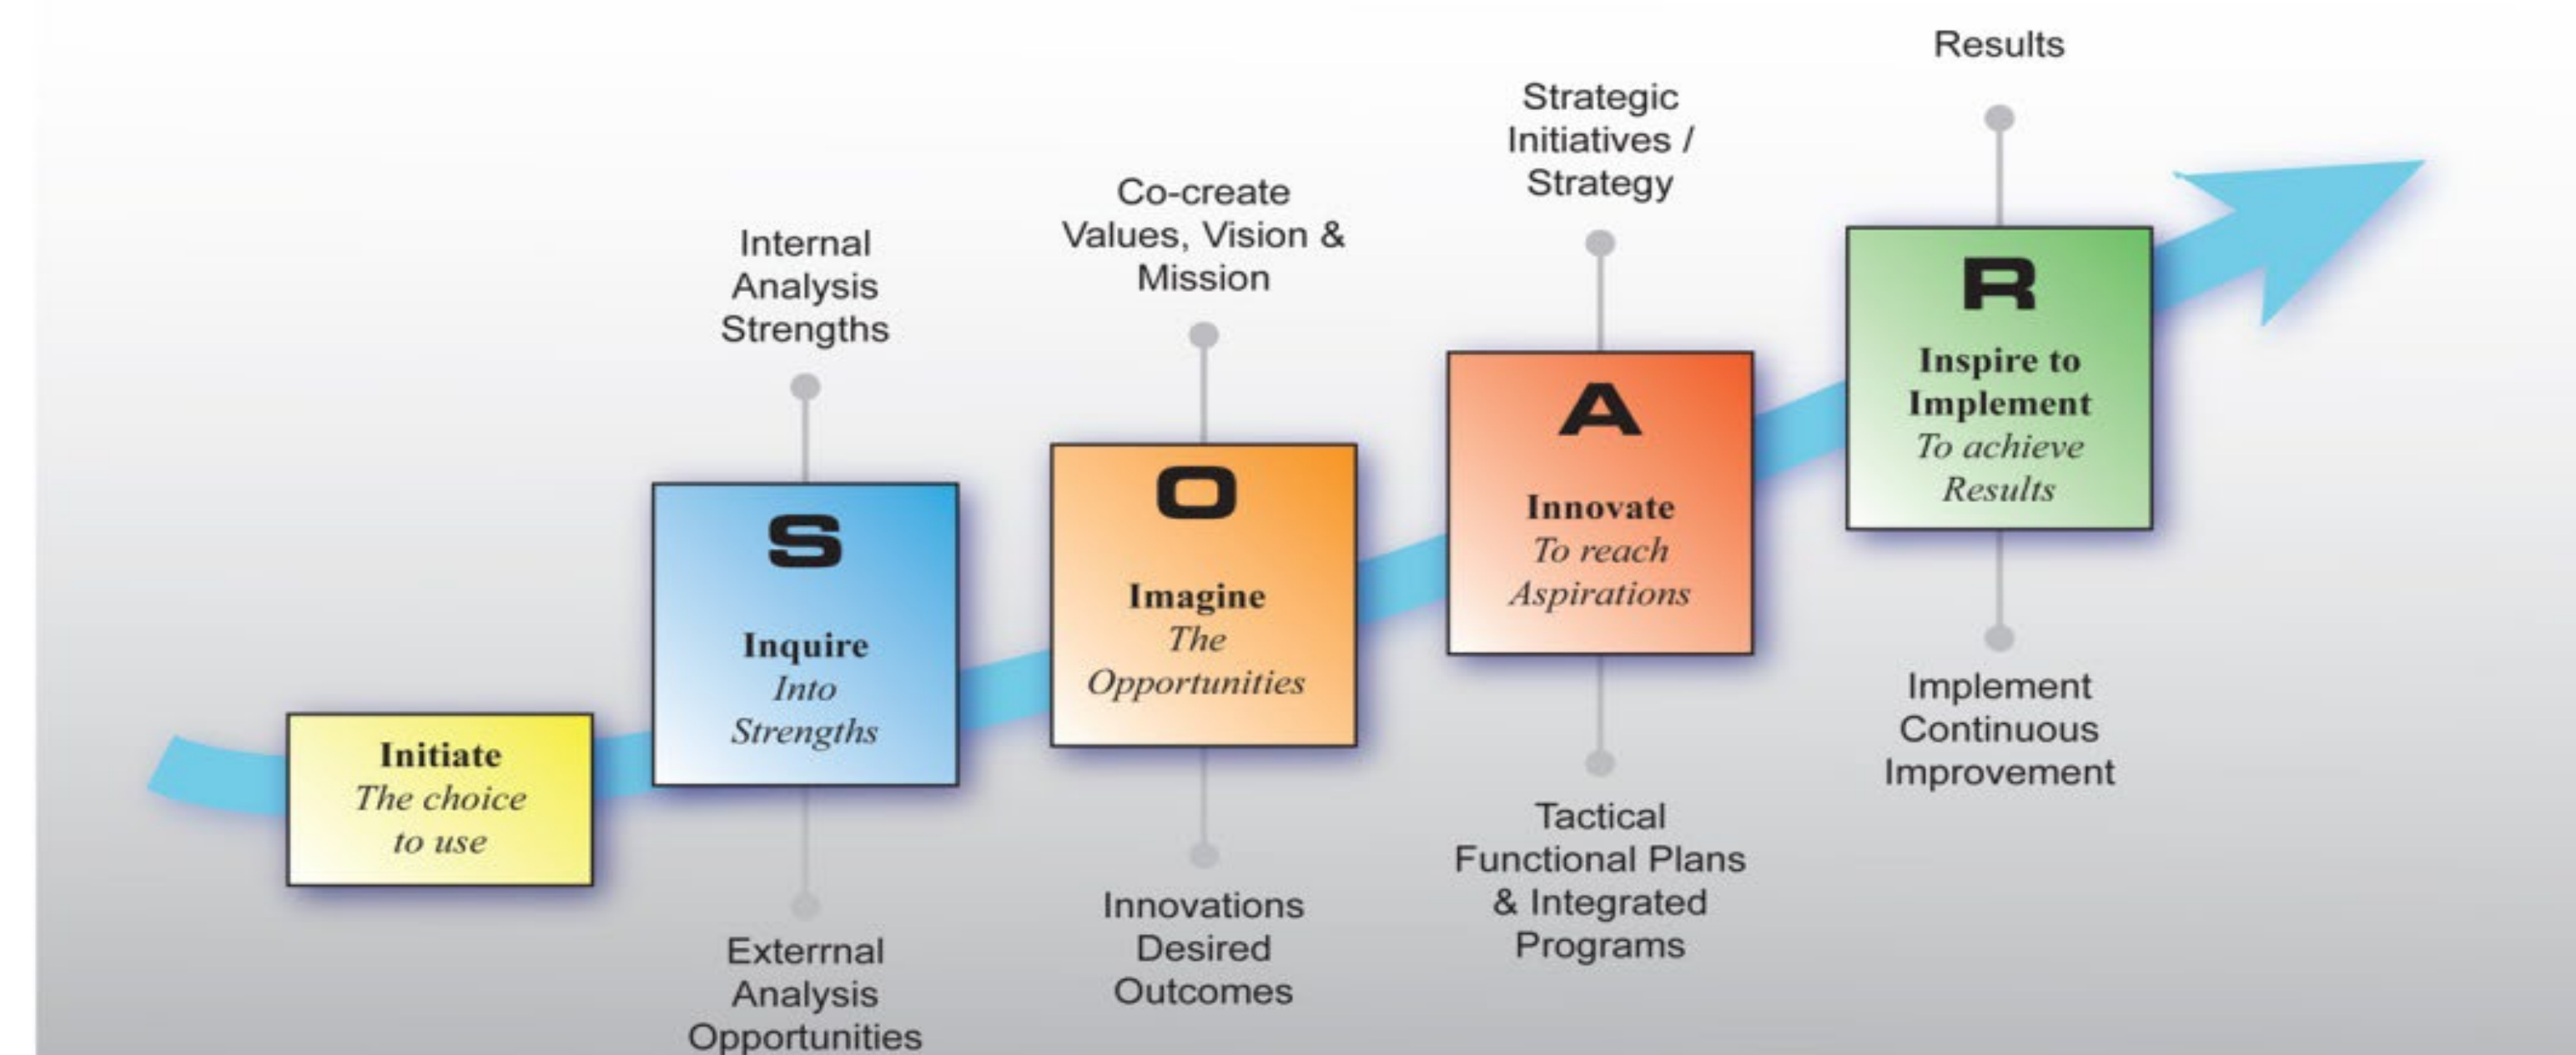

The SOAR Profile 2.0 will replace SOAR Profile 1.0 as we continue administrating the profile in our management related courses, doctoral dissertations, consulting, and training work. We plan to build a SOAR-based website to automate SOAR Profile 2.0 and provide participants with resources to strengthen their SOAR-based capacity and appreciative-perspective to achieve positive results for themselves, their teams, and their organizations.

The next phase of our research will address how SOAR-based capacity and capabilities influence individual, team, and organizational performance. We will administer a brief self-report survey comprised of the SOAR Profile 2.0 and performance indicators to business professionals from a variety of industries via LinkedIn groups. Our new research will aim to link SOAR-based strategic thinking, leading, and planning with individual, team, and organizational performance.
