

## INTRODUCTION

An H-1B visa in the U.S. is a temporary work visa for foreign workers. The analysis result can help international students figure out the most popular job areas for H1B as they decide to pursue a career. This graphics represent popular job titles, companies, states, and average wage. This dashboard helps as a quick reference to answer multiple questions about H1B.

## METHODS

To enhance the quality of data, data cleaning is conducted to correct typos. Next, the job title attribute grouped into industry categories to facilitate the analysis of industry representation. After cleaning the data, I used Tableau to create multiple graphs to answer different questions. Then I combined these graphs into the two dashboards displayed above.

## DISCUSSION

This project will help international students understand their professional opportunities and how they can better their chance to get a H1B by the profession, state and employer they choose.
